ATCC - Resources for Cell Biology

Conservation biology is the management of nature and of Earth's biodiversity with the aim of protecting species, their habitats, and ecosystems from excessive rates of extinction and the erosion of biotic interactions. It is an interdisciplinary subject drawing on natural and social sciences, and the practice of natural resource management.: 478 The conservation ethic is based on the findings ...

Conservation biology - Wikipedia

Fetal human masculinisation depends on testosterone production by the testes and an alternative “backdoor” androgen. Peter O’Shaughnessy, Michelle Bellingham, Paul Fowler and co-workers show that this androgen is likely to be androsterone, which is sexually dimorphic in the fetus but does not come from the testes; instead, synthesis probably depends on placental substrates.

PLOS Biology: A Peer-Reviewed Open-Access Journal

Plant callus (plural calluses or calli) is a growing mass of unorganized plant parenchyma cells. In living plants, callus cells are those cells that cover a plant wound. In biological research and biotechnology callus formation is induced from plant tissue samples (explants) after surface sterilization and plating onto tissue culture medium in vitro (in a closed culture vessel such as a Petri ...

Callus (cell biology) - Wikipedia

In Italy, West Germany and Denmark an extensive culture of European eel in ponds occurred up to the 1970s. However, due to the short summer period (e.g. Denmark) profitable production was impossible.

Application Ethidium bromide (EtBr) is the most commonly used nucleic acid stain for PAGE or agarose gel electrophoresis. The fluorescence of EtBr increases 21-fold upon binding to double-stranded RNA and 25-fold on binding double-stranded DNA so that destaining the background is not necessary with a low stain concentration (10 µg/ml).

1.. Introduction Nitrous oxide (N_2O) is a greenhouse gas with important impacts on our environment. Its 100-year global warming potential is about 320 times as strong as that of carbon dioxide (CO_2). It has a lifetime of approximately 120 years. The major sink for N_2O is the stratospheric reaction with atomic oxygen to nitric oxide (NO). The resultant NO induces the destruction of ...
