Nomograms have a variety of uses in predicting clinical outcomes. Consider prostate cancer as a series of steps ranging from diagnosis to death ; nomograms can be helpful at each step. For example, for a patient with newly diagnosed prostate cancer, nomograms can predict outcomes for treatments, assisting in the decisions of whether to undergo treatment, and if so, which treatment option is best.

Predicting clinical end points: treatment nomograms in

Biostatistics Center. Biostatistics is a key component in planning, conducting and analysing studies in biomedical cancer research, including epidemiology.
