Comparative Renal Function in Reptiles, Birds, and Mammals Eldon J. Braun, PhD In this article, the regulation of the homeostasis of the extracellular fluid is compared for reptiles, birds, and mammals.

Comparative renal function in reptiles, birds, and mammals

The evolution of mammals has passed through many stages since the first appearance of their synapsid ancestors in the late Carboniferous period. The most ancestral forms in the class Mammalia are the egg-laying mammals in the subclass Prototheria. This class first started out as something close to the platypus and evolved to modern day mammals. By the mid-Triassic, there were many synapsid ...

Evolution of mammals - Wikipedia

Warm-blooded animal species can maintain a body temperature higher than their environment. In particular, homeothermic species maintain a stable body temperature by regulating metabolic processes. The only known living homeotherms are birds and mammals, though ichthyosaurs, plesiosaurs and dinosaurs are believed to have been homeotherms. Other species have various degrees of thermoregulation.
